## Medical surgical nursing sample questions with rationale

50 Questions | Total Attempts: 22609 Marco who was diagnosed with a brain tumor was scheduled for craniotomy. In preventing the development of cerebral edema after surgery, the nurse should expect the use of: Halfway through the administration of blood, the female client complains of lumbar pain. After stopping the infusion Nurse Hazel should: Increase the flow of normal saline Nurse Maureen knows that the positive diagnosis for HIV infection is made based on which of the following: A history of high risk sexual behaviors Positive ELISA and western blot tests Identification of an associated opportunistic infection Evidence of extreme weight loss and high fever Nurse Maureen is aware that a client who has been diagnosed with chronic renal failure recognizes an adequate amount of high-biologic-value protein when the food the client selected from the menu was: Kenneth who was diagnosed with the uremic syndrome has the potential to develop complications. Which among the following complications should the nurse anticipate: An elevated hematocrit level A client is admitted to the hospital with benign prostatic hyperplasia, the nurse most relevant assessment would be: Flank pain radiating in the groin Distention of the lower abdomen A client has undergone with a penile implant. After 24 hrs of surgery, the client's scrotum was edematous and painful. The nurse should: Assist the client with sitz bath Apply war soaks in the scrotum Elevate the scrotum using a soft support Prepare for a possible incision and drainage Nurse Hazel receives emergency laboratory results for a client with chest pain and immediately informs the physician. An increased myoglobin level suggests which of the following? Nurse Maureen expecting a client with mitral stenosis would demonstrate symptoms associated with congestion in the: A client has been diagnosed with hypertension. The nurse priority nursing diagnosis would be: Ineffective health maintenance Nurse Hazel teaches the client with angina about common expected side effects of nitroglycerin including: The following are lipid abnormalities. Which of the following is a risk factor for the development of atherosclerosis and PVD? High levels of low density lipid (LDL) cholesterol High levels of high density lipid (HDL) cholesterol Low concentration triglycerides Low levels of LDL cholesterol Which of the following represents a significant risk immediately after surgery for repair of aortic aneurysm? Potential wound infection Potential ineffective coping Potential electrolyte balance Potential alteration in renal perfusion Nurse Josie should instruct the client to eat which of the following foods to obtain the best supply of Vitamin B12? Karen has been diagnosed with aplastic anemia. The nurse monitors for changes in which of the following physiologic functions? Lydia is scheduled for elective splenectomy. Before the clients go to surgery, the nurse in charge final assessment would be: What is the peak age range in acquiring acute lymphocytic leukemia (ALL)? Marie with acute lymphocytic leukemia suffers from nausea and headache. These clinical manifestations may indicate all of the following except: Chemotherapy side effects A client has been diagnosed with Disseminated Intravascular Coagulation (DIC). Which of the following is contraindicated with the client? Treating the underlying cause Replacing depleted blood products Which of the following findings is the best indication that fluid replacement for the client with hypovolemic shock is adequate? Urine output greater than 30 ml/hr Respiratory rate of 21 breaths/minute Diastolic blood pressure greater than 90 mmHg Systolic blood pressure greater than 110 mmHg Which of the following signs and symptoms would Nurse Maureen include in teaching plan as an early manifestation of laryngeal cancer? Karina a client with myasthenia gravis is to receive immunosuppressive therapy. The nurse understands that this therapy is effective because of it: Promotes the removal of antibodies that impair the transmission of impulses Stimulates the production of acetylcholine at the neuromuscular junction Decreases the production of autoantibodies that attack the acetylcholine receptors Inhibits the breakdown of acetylcholine at the neuromuscular junction A female client is receiving IV Mannitol. An assessment specific to the safe administration of the said drug is: Level of consciousness q4h Patricia a 20-year-old college student with diabetes mellitus requests additional information about the advantages of using a pen-like insulin delivery devices. The nurse explains that the advantages of these devices over syringes include: Lower cost with reusable insulin cartridges Use of smaller gauge needle A male client's left tibia fractures in an automobile accident, and a cast is applied. To assess for damage to major blood vessels from the fractured tibia, the nurse in charge should monitor the client for: Swelling of the left thigh Increased skin temperature of the foot Prolonged reperfusion of the toes after blanching If you are thinking about taking the Certified Medical-Surgical Registered Nurse (CMSRN) exam and are curious about the kinds of questions that will appear, this resource will help you prepare with several example questions and rationales. These sample questions are not a requirement to sit for the actual CCMSRN certification examination and do not imply successful performance on the examination. Take the CMSRN Practice Test. You've taken the sample test? How did you do? If you're looking for some extra assistance, view our recommended study aids. These sample questions apply to all exams taken on or after October 25, 2014. The following sample questions are similar to those on the Medical-Surgical Nursing Examination but do not represent the full range of content or levels of difficulty. The answers to the sample questions are provided after the last question. Please note: Taking these or any sample question(s) is not a requirement to sit for an actual certification examination. Completion of these or any other sample question(s) does not imply eligibility for certification or successful performance on any certification examination. To respond to the sample questions, first enter your first and last names in the boxes below (this information will not be recorded; it is strictly for purposes of identifying your results). Then click the button corresponding to the best answer for each question. When you are finished, click the "Evaluate" button at the bottom of the page. A new browser window will open, displaying your results, which you may print, if you wish. This practice exam is not timed, and you may take it as many times as you wish. Good luck! This is a comprehensive examination in order to serve as a reviewer for the upcoming Nursing Board Examination for Nurses on July 2012. Read the questions carefully before answering them. Please choose the best answer. This test covers the following concepts in various forms from easy to difficult questions. Pharmacology Endocrinology Neurology Prioritization of Care Medical-Surgical Review Test Questions 1.
